

a. Is cybersecurity risk management complex? Why or why not?

Yes, for every decision you made had a consequences. So you have to think carefully and consider some factors that could affect the security and the reputation of the company. Moreover, everything lies on your shoulder.

b. What particular cybersecurity/risk management question in the game was difficult to answer? Rationalize your answer.

When talking to budget, it is so hard for it could affect the company, for the board and the executives demands a ROI or return of investments. So we have to think differently and carefully. For indeed as I mentioned before everything lies on your shoulders.

c. Would you answer differently if you were asked to play the game again? Why or why not?

Yes, I will try some possible options in the choices. Since there were an explanation regarding to my decisions, I could be wiser. Moreover, I will still play it again for me not to enjoy but to understands the real world in cyberattack.

d. What vulnerabilities or threats have you encountered in the game? Briefly explain each.

When, deciding to halt the press conferences, but it was demands, so all the pressures are again on your shoulders. Though the app is not ready for the security, but you have no choice, we could be more careful. I encountered a breach of our client's information and even arrested. So next time, I will think again.

e. Is it important and necessary to analyze risks and perform preventive measures against possible attacks for a network? Why or why not?

Yes, at first my decision was right, to invest a third-party company that ensures that the information will secure and could enhance the security of the information. Moreover, it is still important to analyze some risks and performs a preventive measure for any possible future attack, at least we are prepared. Just like a game of chess, we are just securing our positions as well the reputation of the company.
