

- a. **Identify and describe two (2) authentication processes or features being implemented on the website. (2 items x 5 points)**

Note: Do not limit yourself to the list of authentication methods in 08 Handout 1. You may cite other authentication process or feature.

First is they have an authentication process for GMAIL users (specifically the new students). With these, we could ensure that the entered Gmail is legit and the user is the users. Knowing that the Google is indeed tighten to their security.

The second one is the authentication processes for MS Teams for old students. This is to ensure that the registering students is already registered to the STI and has a MS Office account. This is also ensure the legitimacy of the identity of the user.

- b. **Are these authentication processes or features important? Why or why not? (5 points)**

Yes, it is for the security of the information and the legitimacy of the users who are accessing or using the account. Moreover, with this, we could say that the information is indeed legit and making it more secured and allowing the user to feel safe while using the application.

- c. **Are these authentication processes or features enough to secure the website? Why or why not? (5 points)**

For me, it is yes for now. Though I do not hold the knowledge in the current trends especially the new technologies that could somehow breach the information. But for now, we know how secured the google and they using a third step authentication and ensures all of the processes are secured well. Also, ensuring that the users or legit user are the one who is accessing their information and/or using the services.

- d. **What other authentication process or feature would you suggest to reinforce the security of the website? Rationalize your answer. (5 points)**

We could do some face scans to ensure that the user who is trying to access the information is indeed the owner. Or we could try some different ways, like SMS and even some app use Facebook as their authentication.

- e. **In your perspective, does the website follow the golden rules of netiquette? Justify your answer. (5 points)**

Yes, especially in recognizing their rights in privacy. Through implementing safety measures and three or two steps authentication. By speaking of it, the said website indeed promote the said right and even implement it to the system.
